

Speed Time Distance

$$\text{Distance} = \text{Speed} \times \text{Time}$$

$$\text{Speed} = \frac{\text{Distance}}{\text{Time}}$$

$$\text{Time} = \frac{\text{Distance}}{\text{Speed}}$$

Exercise 14.45

1 a)

$$\text{Distance} = 20 \text{ km}$$

$$\text{Time} = 1 \text{ hr } 30 \text{ min} = \frac{3}{2} \text{ hrs}$$

$$\begin{aligned} \text{Speed} &= \frac{\text{Distance}}{\text{Time}} = \frac{20}{\frac{3}{2}} = 20 \times \frac{2}{3} \\ &= \frac{40}{3} = 13\frac{1}{3} \text{ km/h} \\ &\approx 13.3 \text{ km/h} \end{aligned}$$

b) Dist = 40 km
Time = 1 hr

$$\text{Speed} = 40 \text{ km.p.h.}$$

- 1 This distance-time graph shows Lisa's coach journey.

- a What is the speed between 12:00 and 13:30?
b What is the speed between 13:30 and 14:30?

- 2 Tamera is riding a bike. Information about her journey is shown in this graph.

Tamera's journey starts at 8 am.

- a What is her average speed for the whole ride?

- b What is her speed between 10:00 and 10:30?
b) Dist 13-8 = 5 km
Time 1/2 hr

$$\begin{aligned} \text{a) Avg Speed} &= \frac{\text{Total Dist}}{\text{Total Time}} \\ &= \frac{15 \text{ km}}{2\frac{3}{4}} \end{aligned}$$

$$= 15 \div \frac{11}{4} = 15 \times \frac{4}{11}$$

$$= \frac{60}{11} = 5\frac{5}{11} \text{ km/h} = 5.45 \text{ km/h}$$

$$\text{Speed} = 10 \text{ km/h}$$

- 3 Mark sets off from home in his car at 2 pm. He stops to get petrol and then continues on his journey.

Mark returns home later in the afternoon.

The distance–time graph shows more information about this journey.

- Between which times was Mark travelling fastest? Explain how you know.
- What was Mark's overall average speed on the outward journey?
- What was Mark's average speed on the homeward journey?
- The gradient of the line after 4 pm is negative. What does this tell you about the velocity?

a) 2pm to 2.30 pm
steepest gradient

$$b) \frac{\text{Tot Dist}}{\text{Total Time}} = \frac{70}{\frac{3}{2}} = 70 \times \frac{2}{3} = \frac{140}{3} = 46\frac{2}{3} \text{ km/h}$$

$$c) \frac{70}{2} = 35 \text{ km/h}$$

d) opposite direction
therefore coming home

- 4 The velocity–time graph shows information about a runner in a race.

- What is the speed at 12 seconds?
- At what times is the speed 6 m/s?
- What is the acceleration during the first second?
- Find the overall distance travelled.

$$a) 6 \text{ m/s}$$

$$b) 1 \text{ s and } 12 \text{ s}$$

$$c) 10 \text{ m/s}^2$$

$$d) \text{Distance} = \text{Area under graph}$$

$$\begin{aligned} \text{Trapezium} \\ \text{Area} &= \frac{(a+b)}{2} \times h \\ &= \frac{(13+10)}{2} \times 10 \\ &= 115 \text{ m} \end{aligned}$$

- 5 The diagram shows a velocity–time graph.

$$\begin{aligned} \text{a) } a_{cc} &= \frac{\text{Change in velocity}}{\text{Time}} \\ &= \frac{11 - 7}{2} = \frac{4}{2} \\ &= 2 \text{ m s}^{-2} \end{aligned}$$

- a What is the acceleration between 3 and 5 seconds?
- b What is the distance travelled between 3 and 5 seconds?
- c What is the overall distance travelled?

$$\begin{aligned} \text{b) Area under graph} &= \frac{(7 + 11)}{2} \times 2 \\ &= 18 \text{ m} \end{aligned}$$

$$\begin{aligned} \text{c) Area under whole graph} &= \text{rect} + \text{little trap} + \text{big trapezium} \\ &= \frac{7 \times 3}{2} + 18 + \frac{(13 + 6)}{2} \times 11 \\ &= 21 + 18 + 104.5 \\ &= 143.5 \text{ m} \end{aligned}$$
