

Pythagoras Theorem

$$a^2 + b^2 = c^2$$

Example 1

By Pythagoras

$$3^2 + 4^2 = x^2$$

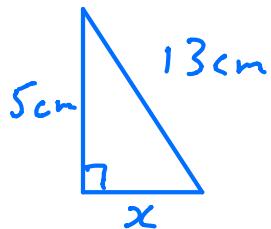

$$9 + 16 = x^2$$

$$25 = x^2$$

$$\sqrt{25} = x$$

$$\underline{x = 5 \text{ cm}}$$

Ex 2

By Pythagoras

$$x^2 + 5^2 = 13^2$$

$$x^2 = 13^2 - 5^2$$

$$x^2 = 169 - 25$$

$$x^2 = 144$$

$$x = \sqrt{144}$$

$$\underline{x = 12 \text{ cm}}$$

Well known Pythagorean Triples

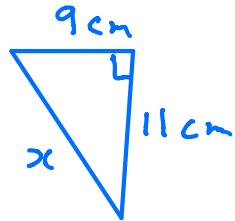

3, 4, 5

5, 12, 13

7, 24, 25

8, 15, 17

Ex 3

By Pythagoras

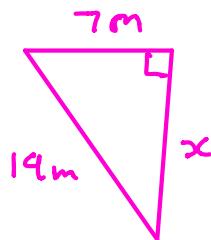

$$\begin{aligned} 9^2 + 11^2 &= x^2 \\ 81 + 121 &= x^2 \\ 202 &= x^2 \end{aligned}$$

$$\sqrt{202} = x$$

$$x = 14.2 \text{ cm}$$

Exercise

1)

By Pythagoras

$$x^2 + 7^2 = 19^2$$

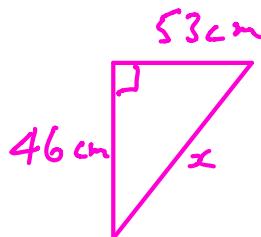

$$x^2 = 19^2 - 7^2$$

$$x^2 = 312$$

$$x = \sqrt{312}$$

$$x = 17.7 \text{ m}$$

2)

By Pythagoras

$$46^2 + 53^2 = x^2$$

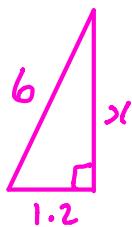

$$4925 = x^2$$

$$\sqrt{4925} = x$$

$$x = 70.2 \text{ cm}$$

Problem.

The foot of a 6m ladder is 1.2m from a wall. How far up the wall is the top of the ladder?

By Pythagoras

$$x^2 + 1.2^2 = 6^2$$

$$x^2 = 6^2 - 1.2^2$$

$$x^2 = 34.56$$

$$x = 5.88 \text{ m}$$
