

## Median and Inter-Quartile Range

Firstly, we will learn how to identify the lower and upper quartiles of a small data set  $Q_1$  and  $Q_3$

Essentially, these are representative of data values one quarter and three quarters of the way through an ordered data set.

### Example 1: 8 data items

$$Q_1 = 26$$

$$\text{Median} = 29$$

$$Q_3 = 36$$

$$\text{IQR} = Q_3 - Q_1$$

$$= 36 - 26$$

$$= 10$$

### Example 2: 9 data items

$$Q_1 = 29$$

$$\text{Median} = 32$$

$$Q_3 = 42$$

$$\text{IQR} = Q_3 - Q_1$$

$$= 42 - 29$$

$$= 13$$

### Example 3: 10 data items

$$Q_1 = 36$$

$$\text{Median} = 39$$

$$Q_3 = 43$$

$$\text{IQR} = Q_3 - Q_1$$

$$= 43 - 36$$

$$= 7$$

### Example 4: 11 data items

$$\frac{n+1}{2}$$

$$Q_1 = 27$$

$$\text{Median} = 34$$

$$Q_3 = 40$$

$$\text{IQR} = Q_3 - Q_1$$

$$= 40 - 27$$

$$= 13$$

Exercise: Find the Median and Inter-Quartile Range

1.

24, 30, 31, 35, 36, 38, 38, 41

2.

39, 43, 44 , 47, 50, 53, 53, 55, 56

3.

50, 53, 54, 56, 60, 64, 70, 71, 73, 74

4.

62, 62, 65, 68, 68, 72, 75, 76, 80, 83, 84
